

To make a FLOWER diagram, answer these three questions:

1. **Does the project protect the climate?** If your project reduces GHGs in the atmosphere, color the center of the FLOWER **dark blue**.

2. **Co-benefits?** For each of the six petals, ask: does my project produce this benefit? If yes, **color the corresponding petal**. If not, leave the petal uncolored.

3. **Who benefits?** For each petal ask: who receives the benefit?

If **everyone benefits**, shade **evenly**.

If the project most benefits **marginalized groups**, shade the **outer edges more darkly**.

If those **already well off** gain most of the benefit, **shade the center** of the petal darker than the edges.
